## **FltPlan Now Offers Current Fuel Price Information For Over 3,300 FBOs**

SOUTHBURY, CT November 4, 2013 -- FltPlan is now offering up-to-date fuel price information for over 3,300 FBOs on its website and mobile apps.

The fuel price listing is designed to offer pilots a single source to look up fuel prices without having to call the FBO or leave the website or app. FltPlan has hired a dedicated staff to contact FBOs and assist in the fuel price updates. According to the company, it now has four times more retail fuel prices posted than ever before making it the most updated and comprehensive source of FBO information.

"Most of the nation's largest FBOs send automated fuel price updates," said Ken Wilson, founder and president of FltPlan, the largest flight-planning service in North America. "At smaller airports however, the staff does not have the ability to update fuel on numerous sources, or the fuel is controlled by the city and frequently no one is in charge of posting prices. Airport personnel tell us they are delighted with the program since it doesn't take time away from their customer service personnel to post prices. Pilots have told us we have the most up-to-date fuel pricing available. With FltPlan's fuel-price posting a pilot can be confident he is getting current prices."

The fuel prices appear on FltPlan's Airport/FBO info page or the Area Fuel Prices page. Both can be found by clicking on the Airports & FBOs button of the Main Menu page and selecting the appropriate link. Pilots can also view pricing on the free FltPlan iPad and Android apps online/offline.

In addition, Wilson explained that FltPlan is the only flight planning company offering an FBO fax briefing that allows pilots before arrival to notify an FBO about services needed such as fuel requirements. This single source service is seamlessly tied in with a pilot's flight plan.

FltPlan ([www.FltPlan.com](http://www.FltPlan.com)) supports pilots with services ranging from flight plan filing, FBO/airport information, flight tracking, certified eAPIS submissions, SMS (IS-BAO and ACSF), runway analysis, weight and balance, eLogbook program, Mexican/Caribbean/Central America handling, Mexican and Cuban overflight services, pre-departure clearances, FAA-approved certified weather, and participation in the FAA's CDM program.
